# Why this brief exists.

This brief is pulled from the Microsoft 365 official release communications feed and supplemented with verified news from the past 48 hours. It runs automatically twice a day and curates what has actually changed, not what has been announced. Every item is sourced. Every takeaway is plain English.

The editorial insight on the final item connects the week's patterns. If something is wrong, check the source. If a source is unavailable, it is noted. This is not marketing. It is a briefing.

# Copilot Chat History Scoped by Experience

M365 CHANGE

Users will now see chat history filtered to their current Copilot Chat endpoint rather than every past session. A toggle lets them switch to an 'All chats' view when needed. This ships as generally available in June 2026.

## TAKEAWAY

- ✓ **Chat history gets less cluttered: you see only what is relevant to the tool you are using right now.**

## ASK

Do your users know the difference between Copilot endpoints, or will this scoping confuse them?

Source: Microsoft 365 Roadmap

02

## Teams AI Interpreter: Captions and Audio Aligned

M365 CHANGE

Three changes are coming to Teams AI Interpreter's Simultaneous mode: live captions and audio now use the same selected language, admins can disable voice simulation entirely, and dynamic voice assignment helps listeners distinguish speakers more easily. GA date is July 2026.

### TAKEAWAY

✓ **Multilingual meetings become more consistent; the mismatch between what you hear and what you read should disappear.**

### ASK

If your organisation uses Interpreter, does your admin know the new voice simulation off-switch exists?

Source: Microsoft 365 Roadmap

03

## Copilot Mind Maps in Notebooks

M365 CHANGE

Copilot Notebooks (available in OneNote and the Microsoft 365 Copilot App) now generates interactive mind maps from notebook content. Each node shows a summary; users can tap nodes for more detail or ask follow-up questions in Notebook chat. This is generally available in May 2026.

### TAKEAWAY

- ✓ **Long notebooks become easier to navigate: you can see structure at a glance and drill into specific topics without scrolling.**

### ASK

Could this change how your team documents meeting notes or project records in OneNote?

Source: Microsoft 365 Roadmap

## 04

## Teams Facilitator Answers Unanswered Meeting

M365 CHANGE

Facilitator, the Teams meeting agent, now detects when a participant asks a question that nobody answers. It offers to retrieve an answer using web search. Participants confirm with a single tap. GA is July 2026.

### TAKEAWAY

- ✓ **Questions that get lost in a busy meeting may get retrieved automatically, reducing the need for follow-up emails.**

### ASK

Who in your organisation decides whether agents like Facilitator are switched on for all meetings?

Source: Microsoft 365 Roadmap

05

## Project Manager Agent Coming to M365 Copilot

M365 CHANGE

A dedicated Project Manager agent is being added to Microsoft 365 Copilot to help with task and plan management. It was in preview from March; general availability is now expected in June after a short delay. The agent handles project tracking and is intended to gain more advanced features over time.

### TAKEAWAY

- ✓ **If your team tracks projects inside Microsoft 365, this agent offers a starting point for automating routine progress checks and plan updates.**

### ASK

Does your team already use Planner or Tasks, and would an AI agent improve or complicate that workflow?

Source: Microsoft 365 Roadmap

06

# Copilot Calendar Agent: Rules in Plain English

AI &amp; PRODUCTIVITY

Microsoft has released a Copilot Calendar Agent for Microsoft 365 Copilot. Users write scheduling rules in plain language and the agent applies them automatically in the background. No separate app or configuration menu is required. Rolling out as part of the May 2026 Copilot updates.

## TAKEAWAY

- ✓ **Routine scheduling decisions can now be delegated to the calendar agent; the question is whether you trust it to act without checking with you first.**

## ASK

What scheduling rules would you feel comfortable handing to an AI agent today?

Source: emdtec / Microsoft 365 Blog

07

# Automation Anywhere Logs One Billion IT Requests and

AI &amp; PRODUCTIVITY

Automation Anywhere announced that its platform has now fulfilled more than one billion IT service requests. At its Imagine 2026 event, it unveiled a Context Intelligence Graph that connects agents to enterprise systems of record and showed 30% higher accuracy in internal tests. The new AAI Code tool lets teams build agent workflows from natural language descriptions in as little as one week.

## TAKEAWAY

 **Agentic automation is moving from IT helpdesk tasks to more complex cross-system processes; the gap between pilot and production is narrowing.**

## ASK

What enterprise process in your organisation would you trust an autonomous agent to resolve without human sign-off?

Source: PR Newswire / TechIntelPro

08

## Gartner: 40% of Enterprise Apps Will Include AI Agents

AI &amp; PRODUCTIVITY

Gartner research predicts that 40% of enterprise applications will embed task-specific AI agents by the end of 2026, compared with under 5% in 2025. CIO Dive reporting notes that enterprises are now overhauling operations to accommodate agents rather than treating them as add-ons. Governance frameworks lag behind deployment rates.

### TAKEAWAY

 **If your organisation is still in a Copilot pilot phase, the market is moving fast: the majority of enterprise software will soon include embedded agents whether you ask for them or not.**

### ASK

Does your organisation have a clear policy on what AI agents are allowed to do on behalf of employees?

Source: CIO Dive / Gartner

09

## The Pattern This Week: Agents Acting Without Being

EDITORIAL

Every item in this edition shares a thread. Microsoft is shipping agents that act automatically — the calendar agent applies your rules, Facilitator answers unanswered questions, the Project Manager tracks your work. Third-party platforms are counting successful autonomous resolutions in the billions. Gartner says this is the norm by year-end. The question for any organisation is not whether agents will be operating in the background, but how much visibility and control employees actually have over what those agents do on their behalf.

### SO WHAT?

**This week, audit one workflow where an agent is already active. Check what it is doing, confirm it is doing it correctly, and decide whether the people affected know it exists.**

**Stay  
informed.  
Take action.**

Nine items from the Microsoft 365 release feed and verified AI news sources. Generated automatically at 08:00 and 18:00. Run 260523-42FA. Sources are cited within each item and in full at 260523-42FA-sources.json.
