Why this brief exists.

This brief is pulled from the Microsoft 365 official release communications feed and supplemented with verified news from the past 48 hours. It runs automatically twice a day and curates what has actually changed, not what has been announced. Every item is sourced. Every takeaway is plain English.

The editorial insight on the final item connects the week's patterns. If something is wrong, check the source. If a source is unavailable, it is noted. This is not marketing. It is a briefing.

01

Copilot Chat History Now Scoped by Endpoint

M365 CHANGE

Microsoft is changing how chat history appears in Copilot Chat. Users will see history filtered to their current Copilot Chat endpoint by default, with the option to switch to an 'All chats' view. This rolls out to general availability in June 2026.

TAKEAWAY

- ✓ **If your team uses multiple Copilot endpoints, the new scoped view reduces noise — but users will need to know the 'All chats' option exists to find older cross-endpoint conversations.**

Does your team use one Copilot Chat endpoint or several, and will scoped history help or hide context people rely on?

02

Teams AI Interpreter Gets Three Simultaneous Mode

M365 CHANGE

Microsoft is adding three improvements to the AI Interpreter simultaneous translation mode in Teams. Caption and audio will now match the same selected language. Admins can fully disable voice simulation. Users will get more voice options with dynamic speaker assignment to help distinguish speakers. GA date is July 2026.

TAKEAWAY

- ✓ **The admin disable option for voice simulation addresses a concern raised in multilingual enterprise settings where synthetic voices created confusion about who was speaking.**

If your organisation runs multilingual meetings, will you keep voice simulation on or turn it off for clearer attribution?

03

Teams Facilitator Will Answer Unanswered

M365 CHANGE

The Facilitator agent in Teams will soon detect when a question is raised during a meeting and goes unanswered. It will offer to search the web for an answer and post the result to the meeting chat if a participant confirms. This is heading to GA in July 2026.

TAKEAWAY

- ✓ **This shifts the Facilitator from passive note-taker to active meeting participant. It is worth testing how the agent interprets rhetorical questions versus genuine information requests.**

ASK How will participants know when Facilitator is about to answer on their behalf, and can they opt out mid-meeting?

04

Mind Maps Land in Copilot Notebooks This

M365 CHANGE

Copilot Notebooks now include interactive mind maps that visualise key topics, themes, and relationships from notebook content. Users can click nodes to see summaries and ask follow-up questions via Notebook chat. The feature is available in OneNote and the Microsoft 365 Copilot app and reached GA in May 2026.

TAKEAWAY

- ✓ **Mind maps give a spatial overview of long or complex notebooks without reading linearly — useful for research, project planning, and meeting preparation where the full notebook may span weeks of notes.**

ASK How does the generated map handle notebooks with diverse or loosely connected content, and can users reshape or annotate the map?

05

Project Manager Agent GA Delayed to June After

M365 CHANGE

Microsoft's Project Manager agent for Microsoft 365 Copilot, which helps plan, organise, and track work, was in preview and was expected to reach general availability this month. Microsoft updated the roadmap on 21 May to confirm GA is now expected in June 2026. No reason was given beyond an apology for the change.

TAKEAWAY

- ✓ **If your team built adoption plans around the May GA date, check the roadmap again in early June. Preview users can continue using the agent in the interim.**

ASK

What caused the slip from May to June, and what should admins do if they have already communicated the launch date internally?

06

Microsoft Launches E7 Frontier Suite and Agent

AI & PRODUCTIVITY

Microsoft introduced two new products at the start of May 2026. The M365 E7 Frontier Suite, priced at \$99 per user per month, targets enterprises deploying autonomous AI agents at scale with added security and governance. Agent 365, at \$15 per user per month, acts as a control plane for agents built on Microsoft AI platforms. Both are now available.

TAKEAWAY

✓ **The separate Agent 365 tier suggests Microsoft expects agent governance to be a distinct cost line in enterprise budgets, not bundled into existing licences.**

ASK Organisations evaluating agent deployments should factor this into total cost calculations.

At \$15 per user on top of existing M365 licences, what is the business case threshold at which Agent 365 becomes cost-justified for your organisation?

07

Salesforce Agentforce Coworker Enters Beta

AI & PRODUCTIVITY

Salesforce released a beta of Agentforce Coworker on 22 May 2026. The feature embeds an AI teammate into searchable interfaces so agents can retrieve CRM context and take actions on behalf of Agentforce customers. It is positioned as a persistent AI participant in sales and service workflows rather than a one-off query tool.

TAKEAWAY

✓ **Agentforce Coworker signals that the CRM vendors are moving toward AI that lives inside the workflow rather than being invoked by prompt. Compare this to**

ASK Microsoft's Copilot in Teams to understand where each vendor places the integration point.

If an AI agent has persistent CRM access and can take actions, what approval or audit layer should sit between the agent's decision and the customer-facing action?

08

Enterprise AI Moves from Pilots to Production

AI & PRODUCTIVITY

The 2026 Deloitte State of AI in the Enterprise report finds 64% of organisations are now actively using AI in operations, with agentic workflows moving from experimentation into full deployment across code development, legal, finance, and administrative functions. Gartner separately projects that 40% of enterprise applications will include task-specific AI agents by end of 2026, up from under 5% in

~~2025~~
TAKEAWAY

- ✓ **The gap between organisations that have deployed agents and those still in pilot is widening fast. The report notes that most companies still treat agents as fancy assistants rather than workers with permissions, memory, and access to data.**

What does your organisation's agent deployment look like compared to the 64% figure — and if you are not there yet, what is the specific blocker?

09

The Agent Layer Is Becoming the Price of

EDITORIAL

Across this edition, a single pattern is visible: Microsoft, Salesforce, and the analyst community are all treating AI agents not as a feature but as a separate governance and cost layer. Microsoft charges for Agent 365 as a standalone SKU. Salesforce ships a persistent CRM coworker. Deloitte finds 64% of enterprises are in production.

Meanwhile, Teams Facilitator is already answering questions on your behalf in meetings. The infrastructure for agents is being built at the platform level — which means the question for most organisations is

SO WHAT?
no longer whether to adopt but how to govern what is already being deployed. **This week, check whether your organisation has a clear policy on what AI agents are permitted to do, what they must ask a human before doing, and who reviews their actions after the fact. That governance gap is the practical risk this edition points to.**

**Stay
informed.
Take action.**
