Why this brief exists.

This brief is pulled from the Microsoft 365 official release communications feed and supplemented with verified news from the past 48 hours. It runs automatically twice a day and curates what has actually changed, not what has been announced. Every item is sourced. Every takeaway is plain English.

The editorial insight on the final item connects the patterns across all stories. If something is wrong, check the source. If a source is unavailable, it is noted. This is not marketing. It is a briefing.

SERIES	Microsoft & AI Brief
RUN ID	260523-D3F4
SESSION	AM Edition . 23 May 2026
SOURCES	Microsoft M365 RSS + verified web
FORMAT	Helvetica . CS Press A5

01

Copilot Chat History Filtered by Experience

M365 CHANGE

Chat history in Copilot Chat will be scoped to the specific Copilot experience in use — Teams, browser, or Office apps. Users see only conversations from that context by default, with an option to switch to an All chats view. General availability is June 2026.

TAKEAWAY

- ✓ **Users moving between Copilot surfaces will no longer see all history by default. They need to switch to All chats to find conversations from a different context.**

ASK

Does your team use Copilot Chat from multiple entry points? Do they know where to find history across those contexts?

02

Teams Interpreter Gets Caption Sync and Voice Controls

M365 CHANGE

Three enhancements arrive for AI Interpreter Simultaneous mode. Audio and live captions will use the same language, ending the previous mismatch. Admins can disable voice simulation entirely. Users get more voice options with dynamic speaker assignment. General availability is July 2026.

TAKEAWAY

- ✓ **Multilingual meetings will be easier to follow, and IT admins gain explicit control over whether voice simulation is enabled or off.**

ASK

Does your organisation use Teams AI Interpreter? Have admins reviewed the new voice simulation disable option?

03

Teams Facilitator Answers Unanswered Meeting Questions

M365 CHANGE

Teams Facilitator will detect when a question during a meeting goes unanswered and offer to search the web for an answer. Participants choose whether to accept. General availability is July 2026.

TAKEAWAY

- ✓ **The Facilitator acts as a quiet backstop for factual queries, reducing post-meeting follow-ups on basic informational questions.**

ASK

In your regular meetings, how many questions typically go unanswered or require offline research after the call?

04

Copilot Calendar Agent Manages Meetings in Plain English

M365 CHANGE

The Copilot Calendar Agent is rolling out for M365 Copilot licence holders. Users set plain-English rules — such as declining meetings with less than 24 hours notice — and Copilot acts on them automatically in the background. Every action is reviewable and adjustable.

TAKEAWAY

- ✓ **For professionals managing high meeting volumes, this enforces scheduling preferences without manually handling each invitation.**

ASK

If you could set three plain-English rules for your calendar today, what would they be?

05

OneDrive Remote Deletes No Longer in Local Recycle Bin

M365 CHANGE

From early May 2026, files deleted from OneDrive via the web or a different device will not appear in the local Windows Recycle Bin. They remain recoverable via the OneDrive web recycle bin. Files deleted locally on the same machine are unaffected. There is no in-product notification.

TAKEAWAY

- ✓ **Anyone checking their local Recycle Bin after a remote delete will not find the file there. Recovery now requires the OneDrive web interface.**

ASK

Have your users been told about this change? Is there a support doc they can reference if a file appears to go missing?

06

Anthropic Adds Self-Hosted Sandboxes and MCP Tunnels

AI & PRODUCTIVITY

Anthropic released public-beta self-hosted sandboxes for Claude Managed Agents on 19 May 2026. Enterprises run tool execution on their own compute via Cloudflare, Daytona, Modal, or Vercel. A research-preview MCP tunnels feature lets agents call internal servers via an outbound-only encrypted gateway, keeping sensitive systems behind the firewall.

TAKEAWAY

✓ **Regulated organisations blocked from managed agents by data residency requirements now have a more viable path to production deployment.**

ASK

Does your current security policy prevent AI agent adoption? Would keeping execution inside your own infrastructure change that?

07

Camunda Launches ProcessOS for Agentic Workflows

AI & PRODUCTIVITY

Camunda announced ProcessOS at CamundaCon, in closed beta from 20 May 2026. It discovers existing business processes, re-engineers them as agentic workflows, and optimises them continuously. Built-in human review gates are included, with AWS and Bedrock integrations.

TAKEAWAY

- ✓ **Operations teams managing complex ERP or CRM stacks can describe an outcome and have ProcessOS convert it to a repeatable, auditable agentic process without rewriting existing integrations.**

ASK

Which single high-value, lower-risk process in your organisation would you want to convert to a governed agentic workflow first?

08

Google Releases Gemini 3.5 Flash and Antigravity Platform

AI & PRODUCTIVITY

At Google I/O on 21 May 2026, Google announced Gemini 3.5 Flash — lighter and faster, tuned for agentic workflows — alongside the Antigravity developer platform. Antigravity lets developers build persistent background agents across Workspace, Search, and developer tools at lower cost than GPU-only stacks.

TAKEAWAY

- ✓ **For teams evaluating multi-provider AI strategies, Antigravity provides an agent development surface using existing Workspace integrations as the entry point.**

ASK

If persistent background agents were available in your tools today, which daily routine would you hand off first?

09

The Agent Is Now Inside the Tool

EDITORIAL

This week, AI agents embedded inside existing tools rather than asking people to open separate apps. Teams Facilitator answers questions inside the meeting. Copilot Calendar Agent acts on rules without being invoked. Anthropic MCP tunnels reach internal systems. Camunda ProcessOS watches and restructures workflows. Adoption is becoming passive — agents act without being called. That raises a question most organisations are not structured to answer: who reviews what the agent decided, and when? The audit trail question is not technical. It is organisational. Someone needs to own the log of agent-initiated actions, and most teams do not have that role defined yet.

SO WHAT?

Before enabling any of these agent features, decide who owns the review of agent-initiated actions. Every automated decision is a decision — and without a defined owner, errors compound quietly.

**Stay
informed.
Take action.**
