# Why this brief exists.

This brief is pulled from the Microsoft 365 official release communications feed and supplemented with verified news from the past 48 hours. It runs automatically twice a day and curates what has actually changed, not what has been announced. Every item is sourced. Every takeaway is plain English.

The editorial insight on the final item connects the week's patterns. If something is wrong, check the source. If a source is unavailable, it is noted. This is not marketing. It is a briefing.

# Copilot Chat History Now Scoped by Experience

M365 CHANGE

Users will see chat history filtered to their current Copilot Chat endpoint rather than a single combined list. A toggle lets them switch to an 'All chats' view. This affects how users find previous conversations when moving between Copilot experiences. General availability is scheduled for June 2026.

## TAKEAWAY

- ✓ **If you use multiple Copilot entry points, expect your chat history to be split by context — find older conversations using the All chats toggle.**

## ASK

Which Copilot Chat endpoint do your colleagues use most, and will scoped history help or fragment their workflow?

<https://www.microsoft.com/microsoft-365/roadmap?id=559601>

02

# Teams Interpreter Gets Three Simultaneous Mode

M365 CHANGE

AI Interpreter's Simultaneous mode is receiving three changes in July 2026: live captions will match the interpreter audio language exactly, admins can fully disable voice simulation, and users get more platform voice options with dynamic speaker assignment. The dynamic voices aim to make it easier to track who said what in multilingual meetings.

## TAKEAWAY

- ✓ **If your organisation runs multilingual Teams calls, the caption-audio sync fix alone reduces the confusion of mismatched text and speech.**

## ASK

Does your organisation have a policy on AI voice simulation in meetings, and should it?

Source: Microsoft 365 Roadmap#562035  
<https://www.microsoft.com/microsoft-365/roadmap?id=562035>

03

# Teams Facilitator Will Answer Unanswered

M365 CHANGE

The Teams Facilitator agent will detect when a question is raised in a meeting and goes unanswered, then offer to look up an answer using web search. A participant must select 'Yes' before it retrieves anything. This is an opt-in prompt, not an automatic interruption. General availability is July 2026.

## TAKEAWAY

- ✓ **Facilitator adds a safety net for technical questions that get left hanging — useful in large meetings where follow-up items get lost.**

## ASK

Who decides whether Facilitator's answer is good enough to act on, and how does that accountability get tracked?

Source: Microsoft 365 Roadmap#558341  
<https://www.microsoft.com/microsoft-365/roadmap?id=558341>

04

# Mind Maps Now Generally Available in Copilot

M365 CHANGE

Copilot Notebooks can now generate interactive mind maps from notebook content, showing key topics and their relationships. Users can click nodes to read summaries and ask follow-up questions in notebook chat. The feature is live in OneNote and the Microsoft 365 Copilot app as of May 2026.

## TAKEAWAY

- ✓ **Mind Maps give a visual entry point to dense notebooks — useful when onboarding someone to a project or reviewing research before a meeting.**

## ASK

Does a visual map of your notebook's content help you spot gaps, or does it just restate what you already know?

Source: Microsoft 365 Roadmap#559029  
<https://www.microsoft.com/microsoft-365/roadmap?id=559029>

05

# Project Manager Agent GA Pushed to June After

M365 CHANGE

The Project Manager agent in Microsoft 365 Copilot was in preview since March 2026 but its general availability has been moved to June. Microsoft has apologised for the delay. The agent is intended to help users plan tasks and track project progress within M365, with more advanced features to follow. No specific reason for the delay was given.

## TAKEAWAY

✓ **If your team was waiting to standardise on the Project Manager agent, plan for June rather than this month.**

## ASK

What does a GA delay on an agent that handles task management tell you about how Microsoft is testing agentic reliability?

<https://www.microsoft.com/microsoft-365/roadmap?id=516576>

06

# Microsoft Restructures M365 Update Channels

AI &amp; PRODUCTIVITY

Microsoft has introduced a new update model with three release audiences: Frontier (earliest access), Standard, and Deferred. Office 365 Connectors in Teams were fully retired on 18 May 2026. The new channel model is designed to give organisations more predictable control over when changes reach their users.

## TAKEAWAY

- ✓ **IT teams should review which channel tier their tenant is in — Frontier users are already seeing features the rest of the organisation won't get for weeks.**

## ASK

Does your organisation have a deliberate policy on which update channel to use, or did you land on a tier by default?

Source: Office Watch / Microsoft 365 Roadmap  
<https://office-watch.com/2026/microsoft-365-update-channels-frontier-standard-deferred/>

07

# Salesforce and Camunda Ship Workflow Agent

AI &amp; PRODUCTIVITY

Salesforce launched Agentforce Coworker in beta, embedding an AI agent directly in searchable interfaces so it can retrieve CRM context and take actions alongside human users. Camunda released ProcessOS in closed beta on 20 May 2026, an AI layer that discovers and re-engineers business processes as agentic workflows. Both are positioned as AI workers embedded in existing software rather than standalone tools.

✓ **The shift is from AI that answers questions to AI that operates inside systems — these are agents with access to real data and the ability to take actions.**

ASK

If an AI agent can take actions in your CRM or process tools, what approval steps should exist before those actions execute?

Source: AI Agent Store / Camunda

08

## Deloitte: 64% of Enterprises Now Actively

AI &amp; PRODUCTIVITY

Deloitte's 2026 State of AI in the Enterprise report finds 64% of organisations actively using AI in their operations, up from earlier stages of piloting. The defining trend is the shift from individual AI use to team and workflow orchestration — coordinating across departments, connecting data, and moving projects from idea to completion. Governance and trust are reported as the central barriers to scaling.

 **The majority of enterprises are past the pilot stage. The work now is connecting AI to existing workflows rather than running isolated experiments.**

ASK

In your organisation, who owns the decision about how AI connects to cross-departmental data and processes?

# From Features to Infrastructure

EDITORIAL

This week's eight items share a single pattern: AI is moving from something you use to something that runs. Microsoft is shipping agents for calendar management, meeting facilitation, project tracking, and form analysis — each one operating inside a familiar tool rather than requiring a separate login. Simultaneously, Microsoft has extended its Insider Risk Management policies to cover AI agents, and restructured update channels to give IT teams more control. The broader market echoes this: Salesforce embeds agents in CRM, Camunda wires them into process flows, and Deloitte reports that 67% of companies are now past the experimental phase. **SO WHAT?** The practical question for this week is not 'should we use AI agents?' but 'who in our organisation decides which agents get access to which data, and what do they do when an agent makes a mistake?'

**Stay  
informed.  
Take action.**

Nine items from the Microsoft 365 release feed and verified AI news sources. Generated automatically at 08:00 and 18:00. Run 260524-91F3. Sources are cited within each item and in full at 260524-91F3-sources.json.
